+LIPO WARM

Lipolytic* bandage warm effect

*Lipolytic > Adjuvant for the treatment of localized adiposity

Warming effect bandage with Hotflux, cutting-edge active compound that stimulates microcirculation and vasodilation without causing skin redness, but generating an internal heat of the tissues, therefore well tolerated. Phosphatidylcholine and Guarana increase the visible slimming effect.

MAIN ACTIVE INGREDIENTS

Hotflux (*Vanillyl butyl ether*): Active ingredient capable of acting on neuronal receptors by inducing the release of the neuropeptide CGRP (calcitonin gene related peptide) that stimulates endothelial cells causing endothelial-dependent vasodilation. The activation of the skin microcirculation is accompanied by a moderate sensation of heat inside the tissues without causing redness on the skin.

Extract of Guarana (*Paullinia Cupana*): It has fat burning action and gives energy to cells. Thanks to its high content of caffeine is able to give an important detox and slimming.

Phosphatidylcholine (*Phosphatidylcholine*): Phospholipid that has chemical-physical characteristics similar to the natural lipids of the stratum corneum that make up our skin; for this, applied topically, it integrates perfectly by penetrating optimally and acting as a carrier for the other active ingredients. Used in the treatment of localized adiposity for its ability to solubilize fats, reducing the volume of adipocytes.

Vitamin E (*Tocopherol*): the Vitamin E is one of the most powerful antioxidants that can effectively counteract the action of free radicals. Tocopherol also restores the skin's ability to retain water, counteracting dehydration, and repairs the damage done to collagen and elastin fibers, restoring firmness and elasticity of the skin.

Professional use

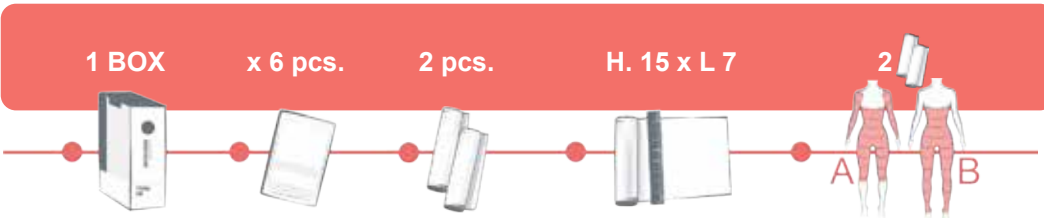

ISO.BE.200

250ml • Net Wt. 8.45 fl oz.

- Warm effect
- Improves metabolic exchanges
- Stimulates the local metabolism
- Regulates fluid retention
- Reduces the stagnation of toxins

Do not use use Lipo Warm with technologies that create a hot and / or cold effect

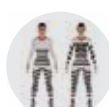

TECHNOLOGIES TO USE IN COMBINATION

Deep Pressure Massage

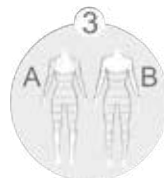

Electrostimulation

Physiostimulation

USE

- 1 • Pre-heat the bandage leaving the closed envelope in a container with hot water for 2 min.
- 2 • Pour the remaining product content into a bowl so as not to waste product
- 3 • Make the bandage as needed - **A.** thighs/abdomen/arms - **B.** legs/thighs/abdomen
- 4 • Apply the previously preserved liquid with a brush (2)
- 5 • If required and allowed, carry out the preparation with the technologies (plates / at etc.) - or leave on for about 30 minutes using cartene to facilitate the absorption of the active ingredients.

Ingredients: Aqua (Water), Propanediol, Alcohol Denat., Glycerin, Paullinia Cupana (Guarana) Seed Extract, Tocopherol, Phosphatidylcholine, Polyglyceryl-4 Caprate, Vanillyl Butyl Ether, Xanthan Gum, Sodium Dehydroacetate, Parfum (Fragrance), Phenoxethanol, Ethylhexylglycerin, Sodium Gluconate, Lactic Acid.

+CRIO ADVANCE

Cold bandage with toning and reducing effect

Cold bandage with a tonic and vasoconstrictor effect, reduces swelling and heaviness of the legs. In addition to the Body Fit compound, a multifunctional active inserted in the formulation improves fluid drainage and skin tone.

*Lipolysis > Adjuvant for the treatment of localized

MAIN ACTIVE INGREDIENTS

Body Fit (Glaucine): It is a multifunctional active ingredient with an innovative mechanism of action. Based on Glaucin, Bodyfit stimulates lipolysis and inhibits the formation of new adipocytes, improves drainage and the distribution of water in the skin tissue but above all stimulates the reversion of adipose tissue to mesenchymal tissue typical of fibroblasts, significantly improving skin tone.

Hydagen Aquaporin (Glycerin, Glyceryl Glucoside): Active technology inspired by a discovery awarded with the Nobel Prize: the cellular water channels, also known as "aquaporins", responsible for the transport of water molecules through skin cells. Hydagen Aquaporin stimulates the formation of aquaporins in epidermal cells for a powerful effect of skin hydration enhancement.

Menthol (Menthol): Extract from the essential oil of Peppermint induces a pleasant refreshing feeling. In addition, it exerts a vasoconstrictor action on the peripheral circulation producing a toning effect.

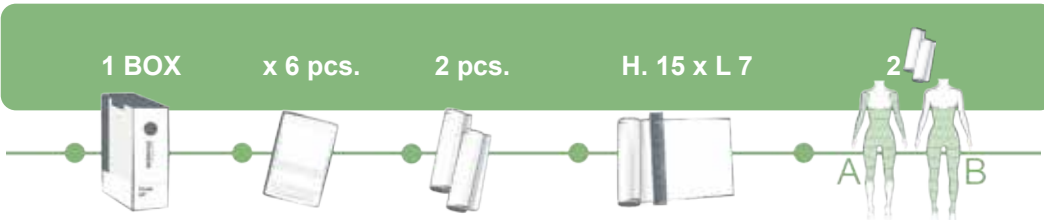

PatchH2O (Aqua (and) Glycerin (and) Trehalose (and) Urea (and) Serine (and) Pentylene Glycol (and) Glyceryl Polyacrylate (and) Algin (and) Caprylyl Glycol (and) Sodium Hyaluronate (and) Pullulan (and) Disodium Phosphate (and) Potassium Phosphate): PatchH2O is a molecular network of high concentration natural biopolymers that offers optimal hydration acting on two levels. On the surface of the skin, the new and unique combination of hyaluronic acid, alginate and a natural glucan known as pullulano, forms a molecular network, that reduces water evaporation. This micro-net is loaded with a moisturizing complex, which is gradually released into the heart of the stratum corneum to rebalance the optimal level of hydration of the skin making elastic and compact.

Professional use

ISO.BE.205

250ml • Net Wt. 8.45 fl oz.

- Cold effect
- Vasoconstrictor effect
- Firming
- Reducing effect
- Skin compacting effect
- Hydrating

Do not use use Lipo Warm with technologies that create a hot and / or cold effect

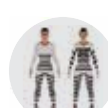

TECHNOLOGIES TO USE IN COMBINATION

Deep Pressure Massage

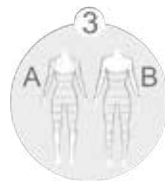

Electrostimulation

Physiostimulation

USE

- 1 • Pre-heat the bandage leaving the closed envelope in a container with hot water for 2 min.
- 2 • Pour the remaining product content into a bowl so as not to waste product
- 3 • Make the bandage as needed - **A.** thighs/abdomen/arms - **B.** legs/thighs/abdomen
- 4 • Apply the previously preserved liquid with a brush (2)
- 5 • If required and allowed, carry out the preparation with the technologies (plates / at etc.) - or leave on or about 30 minutes using cartene to facilitate the absorption of the active ingredients.

Ingredients: Aqua (Water), Propanediol, Alcohol Denat., Glycerin, Coco-Glucoside, Caprylyl Glycol, Algin, Glyceryl Polyacrylate, Pullulan, Alcohol, Sodium Hyaluronate, Disodium Phosphate, Potassium Phosphate, Glaucine, Trehalose, Menthol, Polyglyceryl-4 Caprate, Sodium Gluconate, Urea, Pentylene Glycol, Serine, Glyceryl Glucoside, Sodium Dehydroacetate, Xanthan Gum, Parfum, Phenoxyethanol, Ethylhexylglycerin, Lactic Acid.

+TONING DEEP

Firming, elasticizing and compacting effect bandage

A real beauty treatment dedicated to the tissues of the body, extremely compact thanks to the mixture of 5 hyaluronic acids with different molecular weight, Collagen which increases skin firmness and hydrolyzed elastin at low molecular weight that guarantees elasticity and tone thanks to high penetration.

MAIN ACTIVE INGREDIENTS

Hydrolyzed collagen (*Hydrolyzed Collagen*): Collagen is a fibrous protein, one of the major components of the dermis. Applied to the skin increases its turgor, firmness and thickness. Thanks to the hydrolysis process, collagen breaks down the long native chains, making it easier and deeper skin absorption of the peptide chains that make it up.

Hydrolyzed Elastin (*Hydrolyzed Elastin*): Elastin is a natural protein of the skin, which guarantees elasticity giving firmness. The production of elastin makes possible to prevent the formation of stretch marks and slow down the process of skin aging. Combined with collagen, it has a moisturizing and protective effect of the stratum corneum. The hydrolyzed form of elastin, thanks to its low molecular weight, can be more easily absorbed by the tissues.

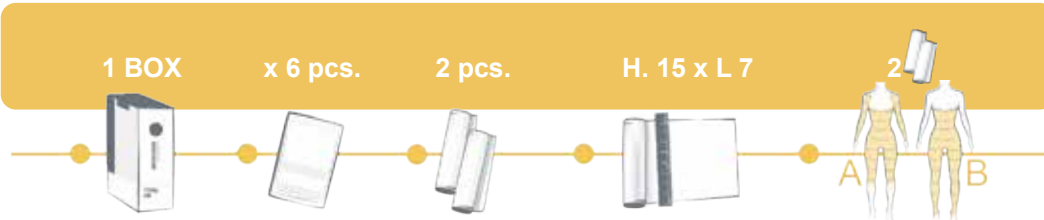

Hyalomatrix, mixture of 5 hyaluronic acids (*Sodium Hyaluronate, Hydrolyzed Glycosaminoglycans, Hyaluronic Acid, Hydrolyzed Hyaluronic Acid, Sodium Hyaluronate Crosspolymer*): It is a very powerful active compound of 5 complex hyaluronic acids with different characteristics that complement and enhance each other. The absorption of Hyalomatrix will be immediate thanks to its very low molecular weight (about 50 kda) and its action will be enhanced thanks to deeper penetration helping to increase epidermal elasticity. The skin will absorb all the components of natural origin beneficial to its health, appearing bright, compact, hydrated, elastic and silky for longer.

Professional use

ISO.BE.210

250ml • Net Wt. 8.45 fl. oz.

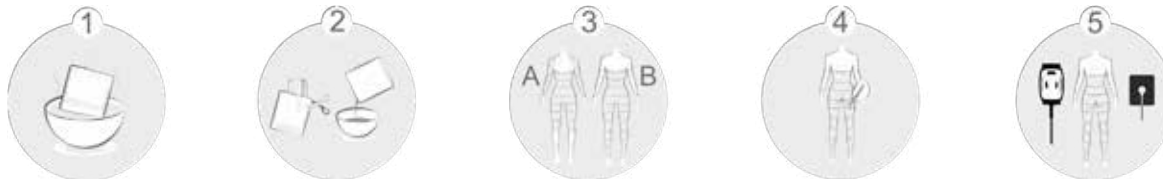

- Elasticizing
- Works against skin relaxation
- Gives firmness to tissues
- Moisturizer

TECHNOLOGIES TO USE IN COMBINATION

	Warm-Massage		Deep Pressure Massage		Infrared Wraps		Heating Blanket
	Synergy Stimol-Laser 980 Plate		Synergy Stimol-Ultrasound Plate		Electrostimulation		Physiostimulation

USE

- Pre-heat the bandage leaving the closed envelope in a container with hot water for 2 min.
- Pour the remaining product content into a bowl so as not to waste product
- Make the bandage as needed - **A.** thighs/abdomen/arms - **B.** legs/thighs/abdomen
- Apply the previously preserved liquid with a brush (2)
- If required and allowed, carry out the preparation with the technologies (plates / at etc.) - or leave on for about 30 minutes using cartene to facilitate the absorption of the active ingredients.

Ingredients: Aqua (Water), Propanediol, Glycerin, Hydrolyzed Collagen, Hydrolyzed Elastin, Sodium Hyaluronate, Hydrolyzed Glycosaminoglycans, Hyaluronic Acid, Hydrolyzed Hyaluronic Acid, Sodium Hyaluronate Crosspolymer, Polyglyceryl-4 Caprate, Sodium Dehydroacetate, Xanthan Gum, Propylene Glycol, Sodium Gluconate, Pentylene Glycol, Parfum (Fragrance), Phenoxyethanol, Ethylhexylglycerin, Lactic Acid.

+DRAIN& DETOX

Treatment with cellulite reducing effect*

*cellulite: adjuvant in the treatment of imperfections caused by cellulite

Specific treatment draining and detoxifying effect, frees the tissues from slag, reduces edema and stagnation of liquids thanks to a mixture of salts with osmotic action in synergy with the escin. In addition, caffeine helps to improve the microcirculation and attenuate the appearance of the skin to "orange peel".

*cellulite: adjuvant in the treatment of imperfections caused by cellulite

*Lipolytic: adjuvant for the treatment of localized adiposity

MAIN ACTIVE INGREDIENTS

Salts of Magnesium sulfate heptahydrate and Magnesium chloride (*Magnesium sulfate - Magnesium chloride*): The salt of Magnesium sulfate heptahydrate, also known as salt of Epsom, has a draining and detoxifying power that is visible after the first treatment, but that is highlighted by continuing the work constantly. It is an excellent ally for those who have problems related to water retention and in the treatment of cellulite* and blood circulation it has also have the ability to protect the capillaries giving a pleasant feeling of lightness to tired legs. Combined with Magnesium chloride promotes an intense draining action counteracting water retention. In addition, they give tone and remineralize the skin and tissues.

Caffeine (*Caffeine*): Naturally contained in the cells of our body, this substance intervenes in the cellular processes of energy production by promoting fat burning. Stimulates skin microcirculation, helps to eliminate excess fluid making the skin more compact. The result is a decrease in the thickness of the orange peel tissue, fat pads and fat deposits, and a toning of the skin.

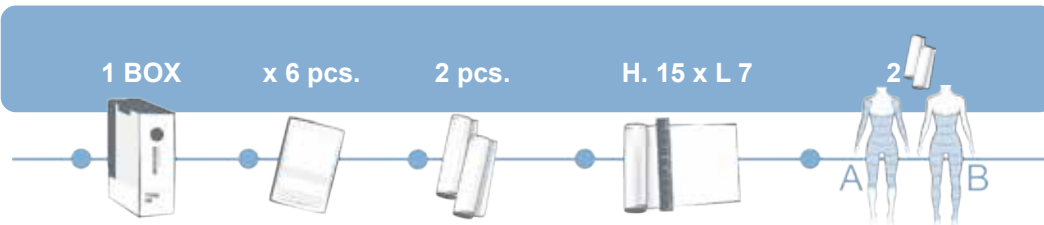

Escin (*Escin*): Mixture of saponins present in horse chestnut particularly useful for the treatment of disorders related to adipose tissues. In particular, it performs an anti-inflammatory, antioxidant, lipolytic and vasotonic activity.

Professional use

ISO.BE.215

250ml • Net Wt. 8.45 fl. oz.

- Deep draining
- Detox action
- Lipolitic* action
- Reduces liquid retention

TECHNOLOGIES TO USE IN COMBINATION

	Warm-Massage		Deep Pressure Massage		Infrared Wraps		Heating Blanket
	Synergy Stimol-Laser 980 Plate		Synergy Stimol-Ultrasound Plate		Electrostimulation		Physiostimulation

USE

- 1 • Pre-heat the bandage leaving the closed envelope in a container with hot water for 2 min.
- 2 • Pour the remaining product content into a bowl so as not to waste product
- 3 • Make the bandage as needed - **A.** thighs/abdomen/arms - **B.** legs/thighs/abdomen
- 4 • Apply the previously preserved liquid with a brush (2)
- 5 • If required and allowed, carry out the preparation with the technologies (plates / at etc.) - or leave on for about 30 minutes using cartene to facilitate the absorption of the active ingredients.

Ingredients: Aqua (Water), Magnesium Chloride, Magnesium Sulfate, Alcohol Denat., Propanediol, Caffeine, Escin, Xanthan Gum, Sodium Dehydroacetate, Phenoxyethanol, Parfum (Fragrance), Ethylhexylglycerin, Sodium Gluconate.

+EXTRA SLIM

Bandage for localized adiposity
with reducing effect

Treatment dedicated to localized adiposities containing last generation active ingredients including a biotechnological marine extract able to mimic the effect of physical activity (Actyгим), which associated with a iodized compound, act in a targeted way on adipocyte improving the definition of the silhouette

*cellulite: adjuvant in the treatment of imperfections caused by cellulite

*Lipolytic: adjuvant for the treatment of localized adiposity

MAIN ACTIVE INGREDIENTS

Actyгим (*Glycerin, Bacillus/soybean ferment extract*): Biotechnological active ingredient containing a marine extract obtained by fermentation from a plankton, Bacillus Sp, from Bermuda Island. It mimics the effect of endurance exercise, increasing the release of adiponectin and promoting mitochondrial activity. The result is an improvement in the tone of the body and definition of the silhouette.

Caffeine (*Caffeine*): Naturally contained in the cells of our body, this substance intervenes in the cellular processes of energy production by promoting fat burning. Stimulates skin microcirculation, helps to eliminate excess fluid making the skin more compact. The result is a decrease in the thickness of the orange peel tissue, fat pads and fat deposits, and a toning of the skin.

Iodotrat (*TEA-hydroiodide*): Highly specialized synthetic molecule, designed and developed using rigorous toxicological and dermatological protocols. It acts quickly and targeted on the adipocyte, activating its metabolism and thus stimulating the mobilization of the adipose panniculus. In vivo tests demonstrate its ability to reduce fat deposits significantly.

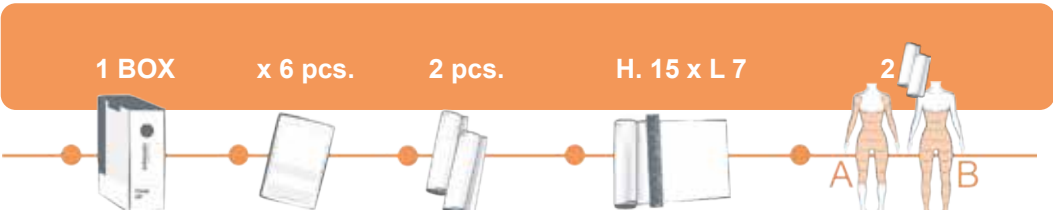

Carnitine (*Carnitine*): Naturally contained in the cells of our body, this substance intervenes in the cellular processes of energy production by promoting fat burning.

Professional use

ISO.BE.220

250ml • Net Wt. 8.45 fl oz.

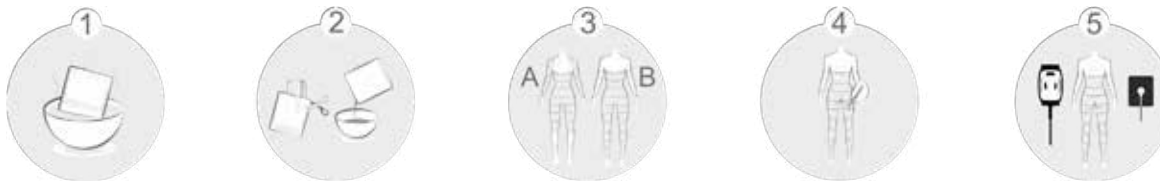

- Reducing effect
- Lipolytic* action
- Definition of the silhouette
- Stimulates the microcirculation
- Improves cellulite *

+CELL IMPACT

Cellulite* specific bandage slimming effect

*cellulite: adjuvant in the treatment of imperfections caused by cellulite

Treatment with impacting effect on cellulite* thanks to the concentration of particular technological ingredients, developed to effectively intervene on all aspects that cause this imperfection. It improves lymphatic drainage at the dermo-hypodermic level and intervenes on the activation of the local microcirculation.

*cellulite: adjuvant in the treatment of imperfections caused by cellulite

*Lipolytic: adjuvant for the treatment of localized adiposity

MAIN ACTIVE INGREDIENTS

Slimexir (*Cynara Scolymus Leaf Extract, Decyl Glucoside, Phenethyl Alcohol, Citrid Acid, Glucose, Caffeine, Xanthine*): Highly technological and innovative active ingredient developed to combat localized fat deposits. Consisting of: a mix of methylxanthines that inhibit the maturation of pre-adipocytes into adipocytes by reducing fat storage, artichoke extract which promotes drainage through the lymphatic system and the elimination of fats through the vascular system and the Levan Polysaccharide with moisturizing effect similar to that provided by hyaluronic acid. Slimexir as a whole is able to stimulate the decomposition of fats, activate the fragmentation of triglycerides stored in adipocytes in small droplets that are more easily disposed of, and improve skin tone.

Caffeine (*Caffeine*): Naturally contained in the cells of our body, this substance intervenes in the cellular processes of energy production by promoting fat burning. Stimulates skin microcirculation, helps to eliminate excess fluid making the skin more compact. The result is a decrease in the thickness of the orange peel tissue, fat pads and fat deposits, and a toning of the skin

Zedomine (*Curcuma longa root oil, Zingiber officinale root oil, Cinnamomum zeylanicum leaf oil*): Mixture of natural essential oils (Turmeric, Ginger, Cinnamomum) able to increase lymphatic drainage at the dermo-hypodermic level and activate blood circulation, distinguishing themselves from common local hyperemizers and superficial vasodilators, that instead of stimulating the hemolymphatic circulation they determine a stasis. In addition, it activates local microcirculation with a non-reddening thermographic effect.

Professional use
