FANGO CELL INTENSIVE

Cream Mud - White Clay

Intensive cell mud, it contains WHITE CLAY that contributes to the detoxifying and draining action enriched by the precious active ingredients which include Dead Sea Salt which, through osmotic action, helps remove excess liquids, and FENUGREEK to recompact the tissues. White clay is particularly suited for the most sensitive skin.

MAIN ACTIVE INGREDIENTS

White Clay (Kaolin) - Rich in mineral salts that are able to improve the vital functions and activate tissue defence processes. It contributes to the detoxifying and draining activity. Applying the clay spurs an osmotic mechanism whereby the toxins in the cell liquid are absorbed by the clay pack, which, on the other hand, releases its beneficial mineral ions.

Sea salt (Maris sal) - Dead Sea salts are particularly rich in natural minerals and inorganic substances taken from the depths of the sea. Their main components are: magnesium, bromine, sodium, potassium, chlorine, calcium, iodine, lithium and sulfur that promote the drainage of liquids and improve the elasticity of the capillaries.

Fenugreek (Trigonella foenum graecum fruit extract) - SOSTITUIRE CON: Helps improve the imperfections caused by *cellulite and provides a nourishing and restorative action. It offers firming properties for mature or stressed skin, leaving it more elastic and toned. For the same reasons it is also used on the bust and low neck line, and thanks to its firming effect it counters cellulite* and water retention.

Fucus (Fucus vesiculosus extract)- Favours the exchange of liquids and offers a reducing, toning and stimulating and anti-*cellulite action. Brown seaweed, comprised mainly of mucilage, mineral salts, iodine, proteins and amino acids, performs a good hydrating, emollient, softening and protective action.

Centella Asiatica (Centella asiatica extract) - Stimulates blood circulation, elasticising and draining action. It provides a draining and adjuvant action for the treatment of the imperfections of cellulite, it improves the function of micro-circulation and maintains skin elasticity (stretchmarks, wrinkles).

ISO.MUD.100

Professional use

1000ml • Net Wt. 33.8 oz.

SUPPORTING PRODUCTS

FANGO SLIM INTENSIVO

Cream Mud - Green Clay

Fango slim intensivo contains GREEN CLAY, with precious and numerous remineralising and detoxifying properties, enriched with ACTIVE ALGES that regulate lipolysis that regulates lipolysis and GREEN TEA and GUARANA' that perform a slimming and reactivating action.

MAIN ACTIVE INGREDIENTS

Green Clay (*Solum fullonum - Fuller's earth*) - Fuller's earth is one of the purest around. Rich in mineral salts that are able to improve the vital functions and activate tissue defence processes. It provides a repairing, remineralising and draining action on stagnant toxins. It helps heavy legs, visible capillaries and stretchmarks.

Oarweed (*Laminaria digitata powder*) - Contains a very high level of organic iodine that is able to regulate lipolysis, i.e. the enzymatic and metabolic breakdown of lipids inside the adipose cells. It is known for being a good source of iodine, which acts synergistically with other substances, thereby breaking down hypodermal fat deposits and effectively fighting the imperfections of cellulite*.

Ivy (*Hedera helix (Ivy) leaf/stem extract*) - Ivy is rich in saponins, it is one of the most useful plants for fighting the skin imperfections of cellulite and the inconveniences of oily skin. Ivy extract, rich in saponins, has a strong cosmetic toning action on all parts of the body that are prone to sagging and losing tone.

Green Tea (*Camelia Sinensis Extract*)- The extract is mainly comprised of polyphenols and xanthinic bases (theophylline). It has a remarkable antioxidant property that translates into a protective action of the micro-circulation. The theophylline in it helps lipolysis and drainage of excess liquids.

Guaranà (*Paullinia cupana*) - Ideal for fighting the imperfections of cellulite and localised adipose tissues. Rich in tannins, caffeine, vitamins and mineral salts, it has energising, toning and stimulating properties.
